Protocolo Descongelamento de Embriões

Técnica One Step

Recomendações importantes:

O embrião a ser descongelado deve ser previamente identificado no botijão de nitrogênio (N₂) líquido, tomando-se os devidos cuidados para não expor a palheta à temperatura ambiente.

A raque contendo embriões deve ser colocada em outro recipiente contendo nitrogênio líquido para facilitar o manuseio dos embriões.
Ex: Caixa de isopor cortada, que caiba a raque inteira.

A raque ou as palhetas nunca devem ser expostas ao ar. O lacrador deve ser visualizado com a palheta submersa em nitrogênio líquido, sem que haja a retirada da mesma do nitrogênio.

Selecione o embrião a ser transferido.

Aguarde a avaliação da receptora. Caso as receptoras já estejam avaliadas anteriormente, aguarde até que o veterinário dê o sinal de que esteja tudo pronto para a transferência do embrião (TE).

Descongele o embrião somente depois de tudo pronto.

OBS: A receptora deve esperar o embrião e nunca o contrário.

Procedimentos

Após todos os procedimentos conferidos e adequados, siga com o descongelamento da seguinte maneira:

Retire a palheta do Nitrogênio e mantenha por 10 segundos no ar.

Após os 10 segundos imergir a palheta em água a 30°C por 20 segundos.

Secar a palheta com papel toalha seco e limpo.

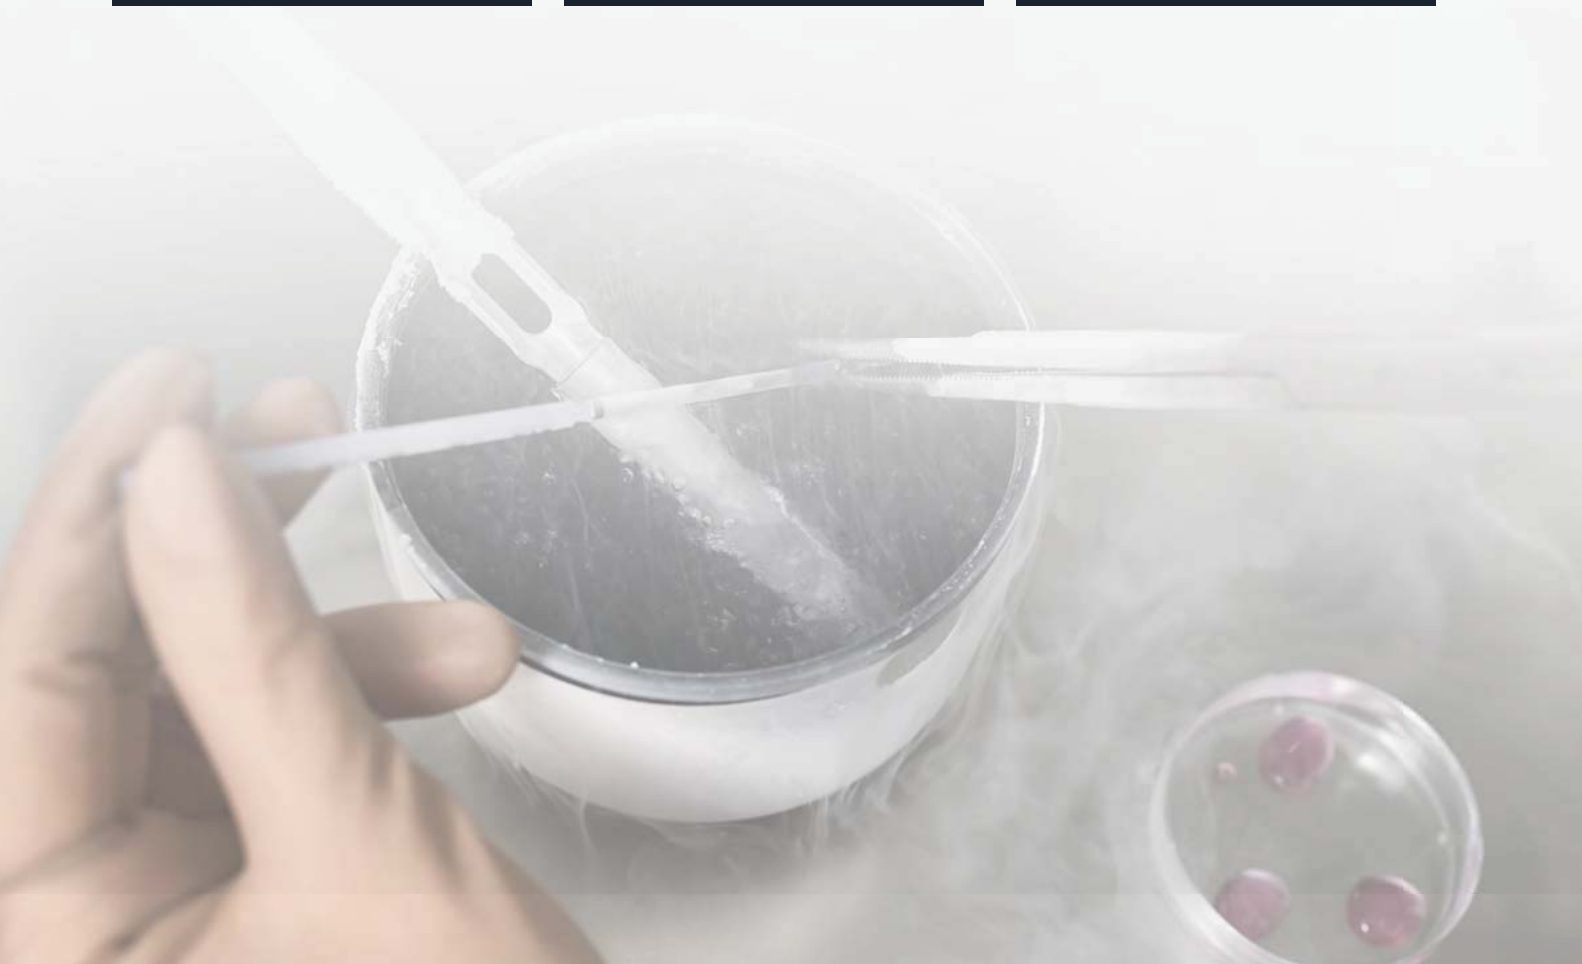

Retire o lacrador e monte a palheta na bainha de transferência.

Entregue o inovulador ao veterinário para que este realize imediatamente a transferência para receptora.

Anote os dados na ficha de TE que acompanha os embriões (identificação do embrião, número da receptora e etc...)

Cenatte Embriões

Descrição Condições de Garantia

- ✓ Garantia de 30% de concepção aos 60 dias.
- ✓ Descrição categorias dos programas Semex Embryos
- ✓ Garantia válida apenas com a tecnologia Cenatte DT (Direct Transfer)

Condições de Garantia

- 1) Todos os procedimentos deverão ser realizados com equipe Cenatte Embriões, sendo estes – Avaliação e sincronização das receptoras, transferência dos embriões e diagnóstico dos embriões aos 60 dias.
- 2) As receptoras que serão disponibilizadas para o programa de transferência de embriões, deverão estar em boa condição corporal e suplementação mineral específica para reprodução animal.
- 3) As receptoras precisarão passar por uma avaliação de escore corporal, onde a equipe Cenatte irá, no momento da avaliação, definir quais animais realmente estarão aptos.
- 4) O produtor deverá apresentar um plano sanitário de cada receptora disponibilizada, contendo as vacinas contra as principais doenças como: clostridioses, IBR, BVD e leptospirose. Além dos animais terem passado por um processo de controle de endo/ecto parasitas, prévio ao início do protocolo.
- 5) Os animais disponibilizados para os trabalhos, deverão apresentar atestado negativo para Brucelose e Tuberculose.

- 
- 6) As receptoras devem estar vazias, sem que tenham tido contato com touro ou inseminação no mínimo 30 dias antes do início do protocolo.
 - 7) As receptoras não devem ter mais que 3 serviços em aberto prévios à data da transferência dos embriões e também mais que 3 partos em sua vida reprodutiva.
 - 8) Em caso de que as receptoras sejam vacas leiteiras em produção, estas não devem apresentar produção de leite acima de 4% do seu peso vivo em produção de leite diária.
 - 9) Os animais não deverão passar por manejo estressante, mudanças do seu plano nutricional ou qualquer alteração de sua rotina, no período do início do protocolo, ao diagnóstico de 60 dias.
 - 10) Devem ser seguidas todas as medidas elaboradas pelo Médico Veterinário do Cenatte Embriões com relação ao protocolo hormonal, horários e datas específicas de aplicação.
